中原大學 104 學年度	考試是	夏卷	0 /
科目名稱:資料結構	開課班級:資工二甲/資	エニこ	油印份數:99/66
考試時間:11月 11日 第3節	科目代號: CS103D/CS1	03E	教師姓名:吳宜鴻
☑ 不可使用計算機、翻譯機或手機	☑可以使用紙本字典	本份試題共 4	頁,本版面為第1頁
☑直接在命題紙上作答(背面可作為計算用	紙)		給分,作答務必力求完整
系級: 1 二甲 學號	10327119	姓名: [5]	过,借户
I. Single-Choice Problems (50%) 每題 3	3分,共20題,答錯一題	倒扣1分,超出	50 分以 50 分計
1. A recursive binary search on a sc	orted array of 100 elements	has base	e cases. (A) 2 (B) 99 (C)
2. Given the array-based implemen	tation of ADT List, how r	many data move	nents will the following
algorithm perform on a list of 10	items? (A) 40 (B) 126 (C) 1	25 (D) 145	
reverseList5(in aList:List, out suc		(2) : 13	1+2+3+0
for (i = 1 to aList.getLength() - 1	1)	9x5=45	2002
{ aList.retrieve(1, dataItem, si	uccess);	31	1+2++8.9
aList.insert(aList.getLength	() – i + 2, dataItem, success);	0
aList.remove(1, success);			
D }			
3. Which of the following statemen	nts inserts a new node, poin	nted to by newP	tr, at the beginning of a
/linked_list? (A) newPtr->next = cu	ur; pre->next = newPtr; (B)	pre->next = cur;	newPtr->next = cur: (C)
newPtr->next = NULL; (D) newP			7 (0)
4. Which of the following strings is i	in the language defined by t	he following gran	mmar? (A) 0b1 (B) 00a1
(C) 00b11 (D) 00a11 0 Y $< X > = a \mid 0 < Y > $		fin-1)	
$\langle Y \rangle = b \mid \langle X \rangle 1$		3 x f(n-1) 1x f(n	(-I)
5. Using a stack to check balanced but	races, if the stack is empty	when reaching th	e end of the string, there
must be? (A) balanced bra	aces (B) no "}" (C) more "{	" than "}" (D) mo	ore "}" than "{"
() Which of the following statement	s will delete the first node,	pointed to be cu	r, from a circular linked
list? (A) $tail = head > next$; (B) $head$	ead = tail->next; (C) tail->n	ext = tail->next->	>next; (D) head->next =
head->next->next;			
7. To find a recursive solution for a p	problem, which of the follow	wing conditions i	s NOT necessary? (A) it
is defined in terms of smaller pro	oblems (B) a numerical var	iable is denoted	as the problem size (C)
every recursive call reduces the pr	oblem size (D) there are at 1	least one base cas	es
8 For an array containing 2, 3, 6, 9, return when it searches for 9? (A)	13, 16, and 19, what value -1 (B) 1 (C) 3 (D) 6	does a recursive	binary search algorithm
9. A recursive function fact(n) that fir		number n would	call itself times
in total if the base case is n=1. (A)			· · · · · · · · · · · · · · · · · · ·
In the recursive solution to		reased by half at	each recursive call. (A)
calculating the factorial (B) Tower	rs of Hanoi (C) finding the n	naximum (D) find	ding the k-th smallest

本份試題共 4頁,本版面為第2頁 科目名稱:資料結構	開課班級:資工二甲/資工二乙
考試時間:11月 11日 第3節	科目代號: CS103D/CS103E
] 11. Which of the following is TRUE for doubly linked lists with a du	X-CT-RTWOODS
the last node has the value NULL (B) the next pointer of the last pointer of the last node references the dummy head (D) the references the last node	node has the value NULL (C) the next
12. What will the recursive algorithm FX(s) display? (A) string s (B)	string s backward (C) nothing (D) the
first character of string s repeated as many times as the length of	s
FX(in s: string)	
if (s is not empty)	
<i>FX</i> (the string beginning at the second character of s)	
Display the first character of s	
() }	
13. Given 4 disks in the Towers of Hanoi problem, the recursive algo	rithm needs to calls the same function
at most times. (A) 15 (B) 16 (C) 22 (D) 31	
4. Which of the following is NOT the benefit of modularity? (A) it r	runs faster (B) it is easier to modify (C)
it isolates errors (D) it eliminates redundancies	
15. After execution of the following codes, line will cause a mem-	ory leak. (A) 1 (B) 2 (C) 3 (D) 4
int *p = new int, *q = new int; // line 1	
p = q; // line 2	(a/(b+L))
delete p; // line 3	(1) (MZS) =
q = NULL; // line 4	
16. Which of the following is a <u>prefix</u> expression? (A) a b c + / (B) a /	(b+c)(C)/a+bc(D)*abc/+
[7]. An algorithm that uses a stack to implement a non-recursive solu	
conclusion that there exists a path from the origin to the desti	
backtracked to the origin (B) backtracked to a city (C) reached a c	
18. Which of the following statements will delete a node, pointed to l	by cur, from a doubly linked list? (A)
cur->precede=cur->next; cur->next=cur->precede; (B)	, ,
cur->next=cur->precede; (C) cur->next=(cur->precede)->next; cu	
(cur->precede)->next=cur->next; (cur->next)->precede=cur->prec	
19. Which of the following belongs to the three basic types of operation	
data from a data collection (B) Move data to another data collec	tion (C) Compute the statistics about
all data in a data collection (D) Connect the data in a data collection	
20. Fill the blanks in the following recursive algorithm that reverses the	ne order of items in the array. (A) low,
high-1 (B) low-1, high+1 (C) low+1, high (D) low+1, high-1	

Algorithm ReverseArray(anArray, low, high)

if low < high then

Swap anArray[low] and anArray[high]

ReverseArray(anArray, _

```

                                                                                                                                                     科目代號: CS103D/CS103E
 II. Simple-Answering Problems (street) 每一空格 3 分,共 11 空格,無倒扣,超出 30 分以 30 分計
           Complete the pseudo codes in terms of the ADT List operations.
           (i) Exchange the first element and the last element in a list.
  void swapFirstLast(in aList, out success)
                                                                                                                       Operation Contract for the ADT List
           aList.retrieve(1, firstItem, success);
                                                                                                                       createList()
           aList.retrieve((1) a) st. act Lemen last ltem, success);
                                                                                                                       destroyList()
           aList.remove(1, success);
                                                                                                                        isEmpty():boolean
           aList. (2) remay e (aList.getLength(), success):
                                                                                                                       getLength():integer
           a List. insert ((3) alist. got length()+1, first Item, success);
                                                                                                                       insert(in index, in newItem, out success)
           aList.insert(1, lastItem, success);
                                                                                                                       remove(in index, out success)
                                                                                                                       retrieve(in index, out dataItem, out success)
           (ii) Reverse the order of all elements in a list.
 void reverseElementOrder(in aList, out success)
 for (int i = 1; i < (4) a ist. get length() ++i)
          aList.retrieve(1, dataItem, success);
           aList.remove(1, success);
          aList.insert((5)alist.get_enuth()-it dataItem, success);
             end for
         Consider the language defined by the following grammar to answer the following questions.
          (i) Write all strings in the language that have less than three characters.
                                                                                                                                                         <$> = <D> | <$> <U> | <D> <$>
          Answer: (6) 0, 1 /A, 18, 04,0B, 00, 01, 10, 11
                                                                                                                                                         <D> = 1 | 0
                                                                                                                                                         \langle U \rangle = A \mid B
          (ii) Is the string 11AB00AB included in this language?
          Answer: (7)
         (iii) Modify the above grammar to define a language of bit-strings that the first character must be 0 and the
                  last character must be 1. (47 = (0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0.7 < 0
          Answer: (8)
                                                                                                                                 (1))0
3. Let aStack be a variable that can support stack operations such as is Empty, push and pop. Complete the
          following pseudo code to determine whether the parentheses in the given expression are balanced.
          isBalanced(string str): bool
          balancedSoFar = true;
          while (not end of string && balancedSoFar)
                 Read the next character ch from str;
                   if (ch is '(')
                               aStack. (9) DIL 4
                   else if (ch is ')')
                            if (!aStack.isEmpty())
```
